6th April 1926.

Dear Del Río-Hortega,

I have long wanted to write to you and send you some reprints of papers of mine which may be of interest either to you or some of your co-workers. Much work of various kinds has been the cause of the long delay. But now, at last, the parcel with the reprints is ready and will leave at the same time as this letter. Among them you will find a copy of <sup>some</sup> early papers of mine which, though now old, you may still like to see and accept with my compliments.

Only a few days ago I finished a review on "Some modern methods for the study of neuroglia" for publication in a British periodical. It deals chiefly with your methods and is illustrated with a few drawings one of which was made from a specimen you gave me when in Madrid. In the text the source is acknowledged but I thought it best to let you know directly and before the review is published.

Both my wife and myself always remember with pleasure our happy days in Madrid and I often thought of coming over there again with a herpetic strain and trying to apply

your methods to the study of neuroglia and microglia in experimental encephalitis. But I ought to have at my disposal no less than 5 or 6 weeks which are difficult to find.

And you? What of coming to spend a few weeks in this country? If you are satisfied with a small bedroom we could easily put you up particularly from next July when we shall have moved into a new house.

Kindly remember me to those I met when in Madrid.

With kind regards,

I remain,

Yours sincerely,

*C. Da Fano*
