Conde de Aranda 4
Madrid

Dear Don Pio:

Your good telegram arrived and today I have your welcome letter of July 30. I am delighted that you will undertake the chapter on - "Microglia, Normal and Pathological" and also that you will write the chapter on - Epiphysis Cerebri. Bailey will describe the tumors that arise from the pineal.

Please give my warmest greetings to your father. I am so sorry that he has not been well. It must have been difficult for you as well. It is a relief to me that you will really join me in preparing this book. Our friendship has meant much to me ~~and~~ and I hope that you will answer my letters.

Don Santiago has written me that he is not feeling well enough to write a chapter. I then asked him to let me translate his previous paper on Neuroglia (1913) leaving out the references to el tercero elemento. He has not yet answered this proposal.

Mrs Penfield sends you good wishes.

With best regards for your father and sisters
very sincerely yours

Wilder Penfield
Wilder Penfield

P.S. I fear I can not get to Madrid this year much as we would both like to go.

W.P.

comienzo a cumplir mi promesa, y contesto en carta a vuelta de
corros. Estoy conforme, desde luego, en que Bailey escriba lo refe-
rente a tumores de la glándula pineal, puesto que yo carezco
de experiencia sobre ellos. Respecto al capítulo de neuroglia,
considero poco adecuada la reproducción del artículo publicado
por G. Sautias en 1913, quitando la parte del tercer elemen-
to y mi añadido lo referiré a neuroglia perivasculares
y oligodendroglia. Creo que todo el capítulo de neuroglia
debe estar hecho por la misma mano. Antes de que
vaya a la parte de oligodendroglia estaré publicando un
reciente observación, que documenta la gran rari-
tancia de esa variedad neuroglia. Le agradeceré un
claro y breve silencio con respecto a mis pander
etc--

Please give my warmest greetings to your father. I am so
sorry that he has not been well. It must have been difficult for you as
well. It is a relief to me that you will really join me in preparing this
book. Our friendship has meant much to me and I hope that you
will answer my letters.

Don Santiago has written me that he is not feeling well enough
to write a chapter. I then asked him to let me translate his
previous paper on Neuroglia (1913) leaving only the references to
of tertiary elements. He has not yet answered this proposal.

Mrs Penfield sends you good wishes.
With best regards for your father and sisters
very sincerely yours

Wilder Penfield

P.S. I fear I can not get to Madrid this year much as we would both
like to go.
