Professor Del Rio Hortega,
University of Madrid,
Madrid, Spain.

Dear Sir,

I have been referred to works by you on the fibrillar structure of epidermal tissues in mammals. Could you please inform me where these studies are described and figured.

I should also be indebted if you could advise me as to the most satisfactory methods of differentiating fibrils in the keratin epidermis. In our studies using X ray crystallographic analysis we are much concerned with the orientation of fibrils in hair, horn, nail and skin cells.

Trusting that you will be able to oblige me.
Yours faithfully,

H M Rudall
